Introduction

Features

Architecture

Dottydoc vs Tastydoc

Problems & Further work

- ▶ Annotations, modifiers (including scope modifiers), parameters, type parameters, and return types

Accessible information

- ▶ Annotations, modifiers (including scope modifiers), parameters, type parameters, and return types
- ▶ Members, parents, constructors, known subclasses and companion

Accessible information

- ▶ Annotations, modifiers (including scope modifiers), parameters, type parameters, and return types
- ▶ Members, parents, constructors, known subclasses and companion
- ▶ User documentation (Wiki-style & Markdown)

- ▶ Extract information from them

- ▶ Extract information from them
- ▶ Independent from the compiler

- ▶ To types

Linking

- ▶ To types
- ▶ Companion

Linking

- ▶ To types
- ▶ Companion
- ▶ Annotations

Linking

- ▶ To types
- ▶ Companion
- ▶ Annotations
- ▶ Scope modifiers

Linking

- ▶ To types
- ▶ Companion
- ▶ Annotations
- ▶ Scope modifiers
- ▶ Parents

- ▶ Easy to edit by hand & preview

Markdown

- ▶ Easy to edit by hand & preview
- ▶ Easy to add own files

Markdown

- ▶ Easy to edit by hand & preview
- ▶ Easy to add own files
- ▶ Easy for the user to make links

Markdown

- ▶ Easy to edit by hand & preview
- ▶ Easy to add own files
- ▶ Easy for the user to make links
- ▶ Git hosting service have built-in preview

Markdown

- ▶ Easy to edit by hand & preview
- ▶ Easy to add own files
- ▶ Easy for the user to make links
- ▶ Git hosting service have built-in preview
- ▶ Easy to convert to another format (HTML, PDF, etc.)

Introduction

Features

Architecture

Dottydoc vs Tastydoc

Problems & Further work

Representation

- ▶ Contain information about an entity

Representation

- ▶ Contain information about an entity
- ▶ Easy to use, no knowledge of TASTy required

Representation

- ▶ Contain information about an entity
- ▶ Easy to use, no knowledge of TASTy required
- ▶ Code is easy to maintain

Representation

- ▶ Contain information about an entity
- ▶ Easy to use, no knowledge of TASTy required
- ▶ Code is easy to maintain
- ▶ Similar to Dottydoc Entity → can reuse Dottydoc code

- ▶ Contain information about types

Reference

- ▶ Contain information about types
- ▶ Necessary for linking

Reference

- ▶ Contain information about types
- ▶ Necessary for linking
- ▶ Inspired by Dottydoc

- ▶ Access to all @ except @usecase and @define

User documentation

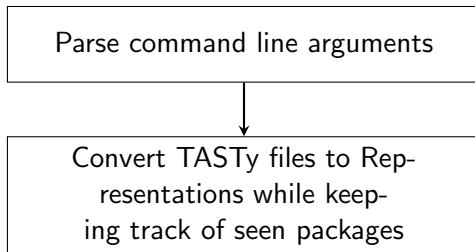

- ▶ Access to all @ except @usecase and @define
- ▶ Support Wiki-style and Markdown

User documentation

- ▶ Access to all @ except @usecase and @define
- ▶ Support Wiki-style and Markdown
- ▶ Uses Dottydoc code modified for:
 - ▶ Markdown output
 - ▶ Small changes in structure

Parse command line arguments

Workflow

Workflow

Introduction

Features

Architecture

Dottydoc vs Tastydoc

Problems & Further work

General comparison

- ▶ Compiler internals

General comparison

- ▶ Compiler internals
- ▶ Markdown vs HTML/CSS

Extra features

- ▶ Scope modifiers

Extra features

- ▶ Scope modifiers
- ▶ Known subclasses

Extra features

- ▶ Scope modifiers
- ▶ Known subclasses
- ▶ Refined types

Bugs fixed

► Buggy output

```
final val BITS_PER_LAZY_VAL : [31m2L[0m
```

Bugs fixed

- ▶ Buggy output

```
final val BITS_PER_LAZY_VAL : [31m2L[0m
```

- ▶ Wrong parents

Bugs fixed

- ▶ Buggy output

```
final val BITS_PER_LAZY_VAL : [31m2L[0m
```

- ▶ Wrong parents
- ▶ Annotations

Bugs fixed

- ▶ Buggy output

```
final val BITS_PER_LAZY_VAL : [31m2L[0m
```

- ▶ Wrong parents
- ▶ Annotations
- ▶ Compiler artifacts

Bugs fixed

- ▶ Buggy output

```
final val BITS_PER_LAZY_VAL : [31m2L[0m
```

- ▶ Wrong parents
- ▶ Annotations
- ▶ Compiler artifacts
- ▶ potentially program breaking code

```
def parents: List[Entity] = this :: this.parents
```

Problems & Further work

Problems

- ▶ Markdown escaping

Problems

- ▶ Markdown escaping
- ▶ Linking inside code blocks

Problems

- ▶ Markdown escaping
- ▶ Linking inside code blocks
- ▶ Section

Problems

- ▶ Markdown escaping
- ▶ Linking inside code blocks
- ▶ Section
- ▶ IDs for linking

Further work

- ▶ Markdown escaping

Further work

- ▶ Markdown escaping
- ▶ Type lambdas

Further work

- ▶ Markdown escaping
- ▶ Type lambdas
- ▶ Complex types

```
class Graph {  
    type Node = Int  
}  
def linkingGraph(g: Graph): g.Node = ???
```

Further work

- ▶ Markdown escaping
- ▶ Type lambdas
- ▶ Complex types

```
class Graph {  
    type Node = Int  
}  
def linkingGraph(g: Graph): g.Node = ???
```

- ▶ Default values

Further work

- ▶ Markdown escaping
- ▶ Type lambdas
- ▶ Complex types

```
class Graph {  
    type Node = Int  
}  
def linkingGraph(g: Graph): g.Node = ???
```

- ▶ Default values
- ▶ Extra user-documentation parsing

Further work

- ▶ Markdown escaping
- ▶ Type lambdas
- ▶ Complex types

```
class Graph {  
    type Node = Int  
}  
def linkingGraph(g: Graph): g.Node = ???
```

- ▶ Default values
- ▶ Extra user-documentation parsing
- ▶ HTML/CSS
